"Filamentous phage infection: crystal structure of g3p in complex
with its coreceptor, the C-terminal domain of TolA.";
Structure 7:711-722(1999).
-!- FUNCTION: INVOLVED IN THE TONB-INDEPENDENT UPTAKE OF GROUP A
COLICINS (COLICINS A, B1, E2, E3, AND K). NECESSARY FOR THE
COLICINS TO REACH THEIR RESPECTIVE TARGETS AFTER INITIAL
BINDING TO THE BACTERIA. ALSO INVOLVED IN THE TRANSLOCATION
OF BACTERIOPHAGE DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Levengood S.K., Beyer W.F. hemagglutinin precursor - influenza A virus (strain A/Mem/102/72)

N. Contains: hemagglutinin HA1; hemagglutinin HA2

C;Species: influenza A virus

C;Species: influenza A virus

C;Date: 19-May-1994 #sequence_revision 19-May-1994 #text_change 31-Mar-2000

C;Accession: A94441, A04051

R;Sleigh, M.J.; Both, G.W.; Brownlee, G.G.; Bender, V.J.; Moss, B.A.
in Structure and Variation in Influenza Virus, Laver, G., and Air, G., eds., pp.69-79, E
A;Title: The haemagglutinin gene of influenza A virus: nucleotide sequence analysis of c
A;Reference number: A94441

A;Accession: A94441

A;Accession: A94441

A;Accession: A94441

A;Accession: A94441

A;Residues: 1-566 <SLE>
C;Superfamily: influenza virus hemagglutinin
C;Keywords: hemagglutinin; homotrimer; lipoprotein; thiolester bond
F;11-15/Domain: signal sequence #status predicted <HA1>
F;346-566/Product: hemagglutinin HA2 #status predicted <HA2>
F;555,562,565/Binding site: palmitate (Cys) (covalent) #status predicted
                                                                                                                                                         밁

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq length: 0

-I- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS CELL RECEPTORS AND FOR INITIATING INFECTION.

-I- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMERS IS FORMED BY TWO CHAI (HAI AND HA2) LINKED BY A DISULFIDE BOND.

-I- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                                                                                                                    SEQUENCE FROM N.A.
